

## INSTALLATION AIDS for self-levelling manhole covers

### PKDY formwork carrier

Carrier for installing formwork in the asphalt layer when installing self-levelling frames.

Universal for all KASI self-levelling frames.

It is used for installation during hatch replacement and for preparation of the installation before the finisher.

## HATCH for temporary operation

### IIAZAK

Cast iron manhole cover used to cover manholes during temporary operation within construction.

It is particularly important as a replacement for self-levelling frames that cannot be temporarily used without being fully built in.

The hatch is manufactured under load class C250.

It is mounted directly into the cone or buffer ring.

### PKDM formwork

Formwork for self-levelling standard series frame without hinge and trap pockets.

### PKDM8 formwork

Formwork for Europa 8 and 9 self-levelling frames with hinge, without trap pockets.

### PKDN formwork

Formwork for self-levelling standard series frame without hinge, with trap pockets.

### PKDN8 formwork

Formwork for Europa 8 and 9 self-levelling frame with hinge and trap pockets.

## KEYS

### for opening hatches and grilles

---

#### XPUK

universal key for KASI hatches

#### XPK-RD

key for control system lock

## HANDLING HOOKS

---

#### SHZPK

manual lifting hook short

#### SHZPD

manual lifting hook long

## AUXILIARY PARTS

### for self-levelling frames

---

#### LDRNN

adapter for attaching DN600 self-levelling frame

#### LFRNN

adapter for attaching DN600 LFRF/LFRE self-levelling frame

#### L8ERNNC

adapter for attaching DN800 self-levelling frame

## HANDLING PLIERS

---

### SV15UNI

self-clamping universal handling pliers 1.5 t

### SV25UNI

self-locking universal handling pliers 2.5 t

## SUSPENDED HANDLING

---

### HUK025

universal ball coupling 1.5-2.5 t

### HLZM16

rope suspension M16, load capacity: 1.2 t

### HP2.5M65

KK-mag container transport handle 2.5 t ø 65 mm

### HP2.5M100

KK-mag container transport handle. 2.5 t, 100 mm

## DAMPING INSERTS

---

### XT8

EPDM damping insert for Europa 8

### XTD

EPDM shock absorbing insert for Standard frame

### XTDPUR

PUR shock absorbing insert for Standard frame

## TPS

assembly foam for joining street gullies

## Training focused on hatch installation problems

We will be happy to visit you or welcome you to our facility in order to train you on how to properly install KASI hatches.

We will discuss various installation procedures, including the use of special fixtures and appropriate construction materials. We will answer any practical questions you may have about our hatches. We will explain what to use and how to use it so that our hatches work to everyone's satisfaction after installation.

## We cooperate with specialists in the field of hatch installation

Just like the products themselves, the technology for incorporating them is continuously moving forward.

We work closely with companies where hatch installation is a daily routine. Therefore, we have practical experience from construction sites, directly from professionals. We can also arrange training or demonstrations of all installation types directly from these specialists.

## Installation by additional milling

What do we think is the ideal way to install hatches? Only if the hatch is not used at all during the preparation of all layers. The construction company will save time avoiding the hatch and all construction layers will be homogeneously compacted. The cover is fit to the finished roadway, in the exact plane, with a full guarantee of no damage during temporary use.
